VILLE DE BROSSARD

RELEVÉ DE VITESSE  
SUR LE CHEMIN DES PRAIRIES À BROSSARD  
ENTRE LES RUES ONTARIO ET OSLO

12 NOVEMBRE 2009

N/D : 15755-001

## Ville de Brossard

### TABLE DES MATIÈRES

---

*Relevé de comptage sur le chemin des Prairies à Brossard*

<b>1.0</b>	<b>Notre mandat .....</b>	<b>1</b>
<b>2.0</b>	<b>Collecte des données.....</b>	<b>2</b>
<b>3.0</b>	<b>Compréhension des données recueillies .....</b>	<b>3</b>
<b>4.0</b>	<b>Moyenne des vitesses et intervalles .....</b>	<b>4</b>
<b>5.0</b>	<b>Commentaires très généraux sur les résultats .....</b>	<b>5</b>

### ANNEXES

<b>Annexe 1</b>	<b>Relevés – Intervalle : 10 secondes</b>
<b>Annexe 2</b>	<b>Relevés – Intervalle : 15 minutes</b>

## **1.0 NOTRE MANDAT**

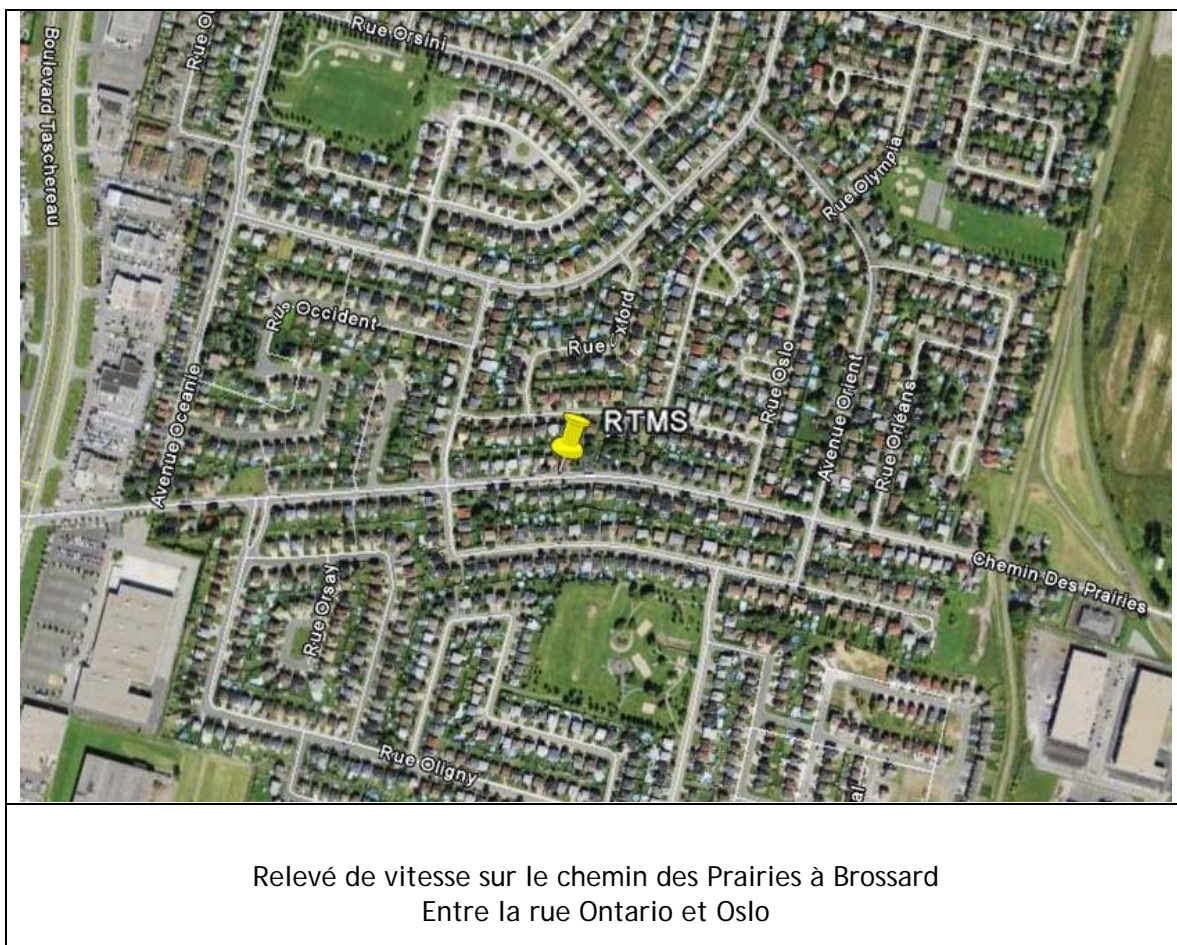

Le mandat de Cegertec consiste à mesurer la vitesse des véhicules circulant sur le chemin des Prairies et à remettre ces résultats à la ville de Brossard.

La demande que nous a été adressée la ville, consiste à effectuer le relevé des vitesses sur le chemin des Prairies entre les rues Ontario et Oslo, et ce, le jeudi 29 octobre 2009 sur une plage horaire de vingt-quatre (24) heures consécutives

## 2.0 COLLECTE DES DONNÉES

Cegertec a effectué la collecte des données sur une plage horaire de 24 heures débutant à 00 h 00 dans la nuit du mercredi au jeudi et se terminant à 24 h 00 (minuit) le jeudi 29 octobre 2009.

Ce relevé a été réalisé à l'aide d'un appareil radar RTMS permettant de détecter à la fois, la présence de véhicules, leur vitesse et leur longueur. Les informations recueillies par le radar sont archivées sur une carte mémoire et il est ensuite possible d'y extraire les données. Les données extraites sont présentées dans un tableau de format Excel que nous avons joint au présent document (Annexes 1 et 2)

### 3.0 COMPRÉHENSION DES DONNÉES RECUEILLIES

Le RTMS regroupe les véhicules selon trois (3) catégories de longueur. Les trois (3) catégories sont les suivantes :

- Les véhicules 1.5 fois plus long qu'une voiture forment la première catégorie « LV »;
- Les véhicules 3.5 fois plus long qu'une voiture forment la seconde catégorie « MdL »;
- Les véhicules 5 fois plus long qu'une voiture forment la dernière catégorie « XLV ».

*LV est l'acronyme pour le terme anglais « Long vehicule » soit petit camion; MdL (Mid size) est l'acronyme anglais utilisé pour signifier les camions et XLV signifie « extra long vehicule », ou véhicule avec remorque.*

Pour connaître le volume total de voitures ayant circulées sur le chemin des Prairies, il faut prendre la valeur totale du volume de véhicules recensés (incluant les trois groupes de camions et les voitures) et y soustraire la valeur du volume de chaque catégorie, soit le volume de tous les types de camions.

## **4.0 MOYENNE DES VITESSES ET INTERVALLES**

Le logiciel traite les données recueillies par le radar et calcule la moyenne des vitesses captées selon un intervalle donné. Pour ce relevé, le calcul de la moyenne des vitesses a été programmé afin de s'effectuer selon deux intervalles distincts, soit pour un intervalle de 10 secondes et également pour un intervalle de 15 minutes. Le résultat des deux collectes de données est présenté dans ce document. Le fichier Excel vous est également remis afin que vous puissiez étudier et analyser les résultats à votre convenance.

Le calcul de la moyenne des vitesses recensées à intervalle de 10 secondes permet de connaître pratiquement la vitesse de chacun des véhicules qui ont circulé sur le chemin des Prairies à cet endroit. Cependant, il faut savoir que, si deux (2) véhicules ont circulé en direction ouest devant le RTMS, à l'intérieur d'un intervalle de 10 secondes, la valeur inscrite dans le fichier Excel représente la moyenne des deux vitesses captées. La moyenne des vitesses captées est calculée pour chaque intervalle et pour chacune des directions, et représente la moyenne pour l'ensemble des catégories de véhicules.

Le choix de la durée de l'intervalle a été déterminé en fonction de la capacité de mémoire disponible de l'appareil et également selon la durée totale de la prise de mesure.

## **5.0 COMMENTAIRES TRÈS GÉNÉRAUX SUR LES RÉSULTATS**

À la lumière des résultats obtenus, on remarque, et ce au premier coup d'œil que les usagers en direction *ouest* circulent globalement à une vitesse beaucoup plus élevée qu'en direction *est*. En effet, les usagers en direction *ouest* circulent à une vitesse moyenne de 55.4 km /h (moyenne sur toute la journée), alors qu'en direction *est* la moyenne est de 41.5 km/h.

On remarque également que le volume de circulation est de 3764 véhicules pour la journée du 29 octobre. En effet, 2049 véhicules ont circulé en direction *est* et 1715 en direction *ouest*.

Céline Foucault, ing.  
Chargée de projet  
CF/tm
